                z[i] = r - l, r--;
            }
        }
    }
    return z;
}
```

## 8 Equations and Formulas

### 8.1 Catalan Numbers

$$C_n = \frac{1}{n+1} \binom{2n}{n} \quad C_0 = 1, C_1 = 1 \text{ and } C_n = \sum_{k=0}^{n-1} C_k C_{n-1-k}$$

The number of ways to completely parenthesize  $n+1$  factors.

The number of triangulations of a convex polygon with  $n+2$  sides (i.e. the number of partitions of polygon into disjoint triangles by using the diagonals).

The number of ways to connect the  $2n$  points on a circle to form  $n$  disjoint i.e. non-intersecting chords.

The number of rooted full binary trees with  $n+1$  leaves (vertices are not numbered). A rooted binary tree is full if every vertex has either two children or no children.

Number of permutations of  $1, \dots, n$  that avoid the pattern 123 (or any of the other patterns of length 3); that is, the number of permutations with no three-term increasing sub-sequence. For  $n = 3$ , these permutations are 132, 213, 231, 312 and 321.

### 8.2 Stirling Numbers First Kind

The Stirling numbers of the first kind count permutations according to their number of cycles (counting fixed points as cycles of length one).

$S(n, k)$  counts the number of permutations of  $n$  elements with  $k$  disjoint cycles.

$$S(n, k) = (n-1) \cdot S(n-1, k) + S(n-1, k-1), \text{ where, } S(0, 0) = 1, S(n, 0) = S(0, n) = 0 \quad \sum_{k=0}^n S(n, k) = n!$$

The unsigned Stirling numbers may also be defined algebraically, as the coefficient of the rising factorial:

$$x^{\bar{n}} = x(x+1)\dots(x+n-1) = \sum_{k=0}^n S(n, k) x^k$$

Lets  $[n, k]$  be the stirling number of the first kind, then

$$\left[ n \atop k \right] = \sum_{0 \leq i_1 < i_2 < \dots < i_k < n} i_1 i_2 \dots i_k.$$

### 8.3 Stirling Numbers Second Kind

Stirling number of the second kind is the number of ways to partition a set of  $n$  objects into  $k$  non-empty subsets.

$S(n, k) = k \cdot S(n-1, k) + S(n-1, k-1)$ , where  $S(0, 0) = 1, S(n, 0) = S(0, n) = 0$   $S(n, 2) = 2^{n-1} - 1$   $S(n, k) \cdot k!$  = number of ways to color  $n$  nodes using colors from 1 to  $k$  such that each color is used at least once.

An  $r$ -associated Stirling number of the second kind is the number of ways to partition a set of  $n$  objects into  $k$  subsets, with

each subset containing at least  $r$  elements. It is denoted by  $S_r(n, k)$  and obeys the recurrence relation.  $S_r(n+1, k) = k S_r(n, k) + \binom{n}{r-1} S_r(n-r+1, k-1)$

Denote the  $n$  objects to partition by the integers  $1, 2, \dots, n$ . Define the reduced Stirling numbers of the second kind, denoted  $S^d(n, k)$ , to be the number of ways to partition the integers  $1, 2, \dots, n$  into  $k$  nonempty subsets such that all elements in each subset have pairwise distance at least  $d$ . That is, for any integers  $i$  and  $j$  in a given subset, it is required that  $|i - j| \geq d$ . It has been shown that these numbers satisfy,  $S^d(n, k) = S(n-d+1, k-d+1), n \geq k \geq d$

### 8.4 Other Combinatorial Identities

$$\binom{n}{k} = \frac{n}{k} \binom{n-1}{k-1}$$

$$\sum_{i=0}^k \binom{n+i}{i} = \sum_{i=0}^k \binom{n+i}{n} = \binom{n+k+1}{k}$$

$$n, r \in N, n > r, \sum_{i=r}^n \binom{i}{r} = \binom{n+1}{r+1}$$

If  $P(n) = \sum_{k=0}^n \binom{n}{k} \cdot Q(k)$ , then,

$$Q(n) = \sum_{k=0}^n (-1)^{n-k} \binom{n}{k} \cdot P(k)$$

If  $P(n) = \sum_{k=0}^n (-1)^k \binom{n}{k} \cdot Q(k)$ , then,

$$Q(n) = \sum_{k=0}^n (-1)^k \binom{n}{k} \cdot P(k)$$

### 8.5 Different Math Formulas

**Picks Theorem :**  $A = i + b/2 - 1$

**Derangements :**  $d(i) = (i-1) \times (d(i-1) + d(i-2))$

$$\frac{n}{ab} - \left\{ \frac{bn}{a} \right\} - \left\{ \frac{an}{b} \right\} + 1$$

### 8.6 GCD and LCM

if  $m$  is any integer, then  $\gcd(a + m \cdot b, b) = \gcd(a, b)$

The gcd is a multiplicative function in the following sense:

if  $a_1$  and  $a_2$  are relatively prime, then  $\gcd(a_1 \cdot a_2, b) = \gcd(a_1, b) \cdot \gcd(a_2, b)$ .

$$\gcd(a, \text{lcm}(b, c)) = \text{lcm}(\gcd(a, b), \gcd(a, c)).$$

$$\text{lcm}(a, \gcd(b, c)) = \gcd(\text{lcm}(a, b), \text{lcm}(a, c)).$$

For non-negative integers  $a$  and  $b$ , where  $a$  and  $b$  are not both zero,  $\gcd(n^a - 1, n^b - 1) = n^{\gcd(a, b)} - 1$

$$\gcd(a, b) = \sum_{k|a \text{ and } k|b} \phi(k)$$

$$\sum_{i=1}^n [\gcd(i, n) = k] = \phi\left(\frac{n}{k}\right)$$

$$\sum_{k=1}^n \gcd(k, n) = \sum_{d|n} d \cdot \phi\left(\frac{n}{d}\right)$$

$$\sum_{k=1}^n x^{\gcd(k, n)} = \sum_{d|n} x^d \cdot \phi\left(\frac{n}{d}\right)$$

$$\sum_{k=1}^n \frac{1}{\gcd(k, n)} = \sum_{d|n} \frac{1}{d} \cdot \phi\left(\frac{n}{d}\right) = \frac{1}{n} \sum_{d|n} d \cdot \phi(d)$$

$$\sum_{k=1}^n \frac{k}{\gcd(k, n)} = \frac{n}{2} \cdot \sum_{d|n} \frac{1}{d} \cdot \phi\left(\frac{n}{d}\right) = \frac{n}{2} \cdot \frac{1}{n} \cdot \sum_{d|n} d \cdot \phi(d)$$

$$\sum_{k=1}^n \frac{n}{\gcd(k, n)} = 2 * \sum_{k=1}^n \frac{k}{\gcd(k, n)} - 1, \text{ for } n > 1$$

$$\sum_{i=1}^n \sum_{j=1}^n [\gcd(i, j) = 1] = \sum_{d=1}^n \mu(d) \left\lfloor \frac{n}{d} \right\rfloor^2$$

$$\sum_{i=1}^n \sum_{j=1}^n \gcd(i, j) = \sum_{d=1}^n \phi(d) \left\lfloor \frac{n}{d} \right\rfloor^2$$

$$\sum_{i=1}^n \sum_{j=1}^n i \cdot j [\gcd(i, j) = 1] = \sum_{i=1}^n \phi(i) i^2$$

$$F(n) = \sum_{i=1}^n \sum_{j=1}^n \text{lcm}(i, j) = \sum_{l=1}^n \left( \frac{(1 + \lfloor \frac{n}{l} \rfloor) (\lfloor \frac{n}{l} \rfloor)}{2} \right)^2 \sum_{d|l} \mu(d) l d$$
